

VÍCTOR VALENZUELA MARTÍNEZ

VIDEO GAME DEVELOPER
COMPOSER AND MUSIC PRODUCER

A third-year student of the Bachelor's Degree in Video Game Development at the Complutense University of Madrid (UCM), I have a versatile profile that combines video game mechanics programming with music composition and production. I have practical experience developing projects in engines such as Godot and Unity, as well as implementing interactive audio. I am proficient in production DAWs like Reaper and FMOD, and I specialize in composing original soundtracks. Thanks to my work as a spokesperson for the LAG association, I also possess strong communication, management, and teamwork skills.

FEATURED PROJECTS

First (Godot / GDScript)

- Educational simulator about social inaction. Implementation of a branching decision system with direct impact on the narrative and character development.
- Responsibilities: Complete programming of the game logic and narrative systems. Composition and production of the original soundtrack.

Theatrum Mundi (C++ / SDL2)

- A mystery visual novel that integrates logic puzzle mechanics and complex state management to advance the investigation.
- Responsibilities: Puzzle and level design. Development of the interactive tutorial system. Composition of atmospheric musical pieces for the menu and third level.

Cortejos Enramados (JavaScript / Phaser)

- A competitive 1v1 game with dynamic dialogue systems and a humorous narrative.
- Responsibilities: Technical development of the dialogue engine. Creative writing. Composition and production of the soundtrack.

EXTRACURRICULAR EXPERIENCE

- Social Media Representative for the LAG association at the Faculty of Computer Science of the UCM, 09/24/2025 - Present.
Responsibilities: In charge of managing the association's social media, being primarily responsible for communicating all activities, events, and other information of interest to all members of the association through its official social media channels.

SKILLS

- Engines and Tools: Unity, Godot, Phaser, SDL.
- Programming Languages: C#, C++, JavaScript, GDScript.
- Music Production DAWs: Reaper, FMOD.
